That is true.

There isn't going to be anything but a date for that stuff in the equipment database.

The things that need to be included in SCRIBE for instrument calibration depend on what data you want to include. Does the initial "field" 3030 readings get put into the SCRIBE data set? If so, you need to include the instrumentation for the 3030. If not, it'll just be the sampling equipment calibration.

The "field" counting thing needs to be decided upon today. How will we manage that data, in or outside of SCRIBE?

The calibration I think they want is from the yearly calibration. I'm looking a record from equipment here in Dallas. So I'm going to leave that in the Instruments table for now. Going to try and get the sheets electronically from the warehouse. Let me know what all needs to be captured for calibration in Scribe and we can attach the PDF as well.

Got a few comments from DOE. Will wait for scientists...

Yes, I spoke with him a short time ago.

I am not sure if Rick has been able to review this, he was in meetings earlier. He is available to review this now. Please send to us and I will call him and walk him through it. He is in the process of revising the MDAs.

Rick Haaker should be sitting there or available.

Alex should be able to sync you up with him

Hold off on template until we get this approved. Any word from your health physicist?

Subject: Las Canchas Fires ER Data Element Dictionary - 1st Draft

Hey Everyone,

Here is the first stab at the Data Element Dictionary for the SCRIBE database to support the fires ER. This is very rough and we need your input. Please review and provide comments, I would not distribute this very far right now because it is a very rough first draft.

Melissa is working on an ERD as we speak.

Thanks,

Brad Morgan
